Cscope requires use of the (traditionally Unix-only) curses screen-drawing library, so some form of curses support is needed to run it on DOS or Windows. Our download files include a zip file that contains a Cscope binary compiled with DJGPP (an open source compiler for DOS that has a fast native curses library). This binary should work on any version of Windows (3.1, 95, NT, 2000) or DOS.

A SCOPE document is one of those fundamental documents that define and guide any major project. As a technical writer you may be asked to write one, in close coordination with the project management (or your private client). In terms of its strategic abstraction, the SCOPE comes right after the VISION document.

A scope statement or scoping document is one of the most critical pieces of a project, and writing one can be a difficult task for a project manager - no matter what type of project management methodology is being used. But, an effectively written scope statement can help the rest of the project flow along with minimal problems.

Cscope is a Linux tool for browsing source code in a terminal environment. Cscope for a small project Select the type of search that you'd like to perform, type in your search term and hit Enter. At the top of the screen Cscope will display a list of results with the file, function, and line where the search term was found.

## **Cscope Tutorial - University of Washington**

Cscope is a classic source code explorer that can be used to explore a directory containing C source and header files. It can also be applied on C++ files, but do not expect much intelligence on C++ features. It indexes the source files, just like ctags, but provides more useful ways to query the code.
