Multilevel models (MLMs, also known as linear mixed models, hierarchical linear models or mixed-effect models) have become increasingly popular in psychology for analyzing data with repeated measurements or data organized in nested levels (e.g., students in classrooms).

vii Multilevel analysis is a complex and diverse field. The goal of this book is to provide an introduction to the basic approach and purpose. It can only give a first impression of the great diversity and depth of multilevel analysis. Several more advanced texts are available to researchers for further study.

Multilevel analysis allows for more than just accurate estimation of regression coefficients and standard errors due to non-independence and quantification of between-cluster variation (the ICC). As variables can be measured at different levels of the hierarchy, it allows for correct inferences about cluster-level variables to be made.

Lecture 1 Introduction to Multi-level Models

Multilevel Models in R 5 1 Introduction This is an introduction to how R can be used to perform a wide variety of multilevel analyses. Multilevel analyses are applied to data that have some form of a nested structure. For instance, individuals may be nested within workgroups, or repeated

measures may be nested within individuals.

Multilevel Modeling in R (2.6)

Mathematically, multilevel analysis with repeated measures is very similar to the analysis of data in which subjects are clustered in groups. However, one point to note is that time-related predictors must be explicitly entered into the model to evaluate trend analyses and to obtain an overall test of the repeated measure.

Multilevel modeling for repeated measures - Wikipedia

Multilevel models are also useful in analyzing clustered data (e.g., persons nested in groups), in which one wishes to examine predictors pertaining to individuals or to groups. This 4-week course will serve as an applied introduction to multilevel models, focusing primarily on longitudinal data and then continuing onto clustered data.
