Single Board Computer (SBC) offers a ready-to-use embedded development platform for building end-products. SBC accelerates time-to-market and minimizes development cost and risk. However, System on Module (SoM)/Computer on Module (CoM) is a more appropriate choice for building embedded products.

Why choose System on Module over SBC for Embedded Development?

The ESM is designed to measure engineering aptitude through the application of basic technical problem-solving skills. This test is a simulation exercise in which you are working for a fictitious company. What's Important The ability to use problem-solving skills and the provided background
